FOR IMMEDIATE RELEASE

Reading, Pennsylvania, September 8th 2005 – Dynamic Net, Inc. completes major hosting migration for a universal hardware and facilities upgrade in Cincinnati, OH.

This is the first time Dynamic Net, Inc. has migrated their hosting clients to a completely new environment in almost four years, but is the third major upgrade/migration in their last ten year of operation in the Web Hosting, Internet Server Administration, and Internet Server Security fields.

“We made this move because we had the opportunity to upgrade to a superior facility that included improved infrastructure, increased physical security, and a vast list of improvements across the board. Our drive to continually improve on everything we do is critical in not only keeping our servers fast and reliable, but in keeping our clients safe and secure behind the scenes” said Peter Abraham, CEO of Dynamic Net, Inc.

The top-of-the-line facility Dynamic Net has chosen for its shared hosting and managed server clients includes everything one would expect in a tier 1 quality facility -- raised floors, 24x7 hardware technicians, redundant carrier grade Internet links, redundant forms of backup power, and much more. It was originally built to meet the stability and security requirements of major financial institutions and maintains that standard/clientele today. The facility, among other accolades, has maintained 100% power availability for 18 consecutive years.

Dynamic Net has also used this move as an opportunity to upgrade every aspect of their hosting infrastructure in more than doubling its number of servers (a combination of high-end Dell and Compaq servers), upgrading features in hardware fire-walling, and improved switch/routing capability with a combination of Foundry and Cisco gear.

“Not only will our clients benefit from upgrades across the board on our already strong security efforts, but they will also receive upgrades on almost all of our hosting offerings and increased performance to boot. It’s rare to you have the opportunity to add so much improvement and value without passing the cost of that investment onto the client, but I’m very proud to say that our team not only did just that; We made a point of it” said Jake Winemiller, Director of Business Development at Dynamic Net, Inc.

This multi-stage migration was made possible by combining the efforts of highly trained technicians from companies based in Pennsylvania, Ohio and Eastern Europe and took months of planning to ensure that most clients were able to work through the move without even realizing it had been completed.

About Dynamic Net, Inc.

Dynamic Net Inc. is a privately owned, Pennsylvania, corporation in the business of helping companies meet their managed hosting, managed services, and managed security needs. Dynamic Net removes the hassles out of secure, reliable Web hosting. Please visit <http://www.dynamicnet.net/> for more information.
